Abstract

The Zenith IoM Ltd will be raising funds to create a platform to provide customers with a new type of service - a global donation platform. With a technological core based on advanced blockchain technology and artificial intelligence, it aims to solve many of the challenges surrounding donations in the modern world. Key to this goal is the crafting of our utility token, the AEN token. The AEN token will be issued and operated using the Wowoo system. We believe that there are many stakeholders who will benefit from using our token, as well as its surrounding ecosystem, for making truly global donations.

Unit 1: The ZEN Project

1.1 The Zenith IoM Ltd's Role

The Zenith IoM Ltd will create the blockchain donation platform to process donation transactions and store the funds that have been donated. The platform will provide stakeholders with useful information, such as data regarding donors, the donations' recipients, and donation intermediaries.

The Zenith IoM Ltd will be issuer of the ZEN token (AEN). By making donations with this token, users will be empowered to donate their money in a number of truly beneficial ways for the world community. Recipients of donations as well as their intermediaries will be sure of the transparency of charitable transactions on the platforms. It will become possible to launch a huge array of new, improved, charitable endeavors with ZEN.

1.2 The ZEN Foundation Role

The Zen Foundation is the governing body of Zenith IoM Ltd. The Zen Foundation will be managing the capital raised through the token sale. The governing body of Zen Foundation will be allocating the use of funds based on the Foundation's policies and procedures.

1.3 Challenges

At Zenith, we aim to address the following challenges:

- High remittance costs for small contributions.
- Lack of a convenient option for people who wish to make a regular donation of a small amount of money.

- Conventional anonymity in making donations is not satisfying enough to many contributors.
- Lack of a tangible reward for making donations.
- Lack of transparency in terms of how donated funds are used.
- Mismatch between the fact that most donations are only set to occur once, and that a charitable project may have a multi-year duration.

The making of small contributions to charitable causes is what holds society together. That being said, bank remittances in today's economy are time consuming and expensive. Other kinds of remittances, such as those made with cash, are technologically outdated and insecure. We believe that these challenges hold an adverse effect to growth in the amount of money that is donated. Unnecessary obstacles are in the way of many people who wish to make regular donations.

Donation is one of the joys that is part of leading a virtuous life. Many people, however, would like to receive some kind of non-monetary reward for having donated. Unfortunately, in the case of many charitable endeavors, the contributor receives nothing.

Furthermore, the way contributed funds are used is often opaque. Charitable organizations that act as intermediaries between contributors and recipients are often very unclear about where the money goes.

In addition, it is often very difficult for relationships between charitable contributors and the recipients of funds to be established. Often all communication stops once the donation is completed.

People generally do understand that charity is important. That being said, a number of factors hinder growth in how much money is donated. These factors include economics, human motivation, the reliability of charitable organizations, and a lack of a real human bond between donors and recipients.

1.4 The ZEN Solution

As a solution to these challenges, we have decided to use blockchain technology to build a next-generation platform for charitable donations. Central to this platform is the AEN token.

This token has the following characteristics:

1. AEN empowers donors to choose the donation model that fits them best:

- **Donation by Covenant:** This function allows recipients and charitable organizations to create a set of conditions that must be met in order for funds to be released. To illustrate, a charitable project could put stipulations into the contract that some important milestone must be met before the donation funds reach the recipient.
- **The “Lionization” Option:** With this option, the donor will have their name permanently engraved into the billboard of the platform and the donation will be recorded for eternity on the blockchain.
- **Micro-donation:** This is an option where donors can send a small fund amount.
- **The AEN Allocation Option:** This option enables donors to allocate their AEN token balance holdings to multiple projects.
- **Eternal Record:** With this permanent record, donors will be able to browse his or her noble acts even with their grandchildren. A record of each donation will exist for all the donor’s descendants to see and admire. One good deed today will bring honor to the donor’s family for millenia.
- **The Devaluation Option:** This option allows donations to be made in smaller currency units than is possible with fiat currency. Fiat currency donation requires a certain amount of donation due to remittance costs. We will remove that barrier.

2. Special features for recipients of charity, charitable organizations, and other intermediaries:

- **The “Look-Through” Report:** This feature displays statistics about how the funds that were donated have been used, increasing transparency.
- **Contributor report:** Gives information about the contributors who have donated.
- **Analysis reports on how AEN token holders allocate assets to the recipient's donation project**
- **Analysis reports and recommendations by artificial intelligence (AI)**
- **Advice on project development and on the fundraising campaign.**

1.5 Use Cases

These are just some of the many potential use cases that the “ZEN Project” could bring to the world of tomorrow:

Use case 1 - The “Stop Killing Dogs and Cats Project”

Mr. A has always had a deep and abiding love for animals of all stripes. But he's always had a particular affinity for dogs and cats. So when he found the "Stop Killing Dogs & Cats" project, he just had to donate. It's his passion after all. He found the project through the ZEN platform website. This project is run by an animal non-profit organization that aims to increase the number of foster parents for at-risk pets. The offering period of the donation is 3 months, and the project is projected to last at least one decade. He confirmed the covenant terms and decided to use a compensation fee basis that is based upon success. That is to say that funds will only be released upon the achievement of a certain goal. Mr. A's stated goal is the placement of one thousand of dogs & cats in loving foster homes.

A thank-you letter from the foster parents to Mr. A will be placed on the website's bulletin board - this public thanks is just one of the secondary rewards for his contribution. His descendants will be able to see the their ancestor's contribution and take great pride in it in the future.

Further, if Mr. A's designated condition is cleared in the first 3 years, he will be eligible to become a council member at the non-profit.

Mr. A can check the tracking record via the intermediary site and see exactly where his funds have been utilized and when - giving Mr. A unparalleled access to the final destination of his donation and giving the non-profit incredible transparency. In the event that the stated goal is not completed or that the time allotted to finish the goal expires, the donation will not be released to the organization and Mr. A's funds will be returned to him.

In the end Mr. A decides to donate 1000 AEN to the project.

Use case 2 - The Small Reserve Fund Program

Mrs. B is a young mother. She recently had her first child and is still getting used to parenting. When she was a girl her parents instilled in her the importance of education and service to society as a whole. Because of these deeply-ingrained values, she wants to make a donation to a charity that she is passionate about, but because of her new baby she is less willing to part with funds that could be used to improve her child's quality of life.

In the end Mrs. B decides to join the ZEN-CP Small Reserve Fund Program - an innovative program that allows her to slowly set aside money, all the while benefiting from an extremely low remittance cost. After 3 years the total balance of the fund reached 100,000 AEN. Once this milestone was reached, she was received at a special event. There Mrs. B chose to donate the funds to her favorite organic tapestry preservation group. Both Mrs. B and her daughter greatly enjoyed the event.

Mr. B's daughter grew up seeing her mother consistently donate to her favorite charities through this innovative program. She used her own giving as a chance to instill in her daughter the same

values that her parents had instilled in her. She hopes that her daughter will one day find a charity of her own and continue the family tradition of giving.

The giving events are recorded and stored so that her daughter's children will be able to see her history of giving and tell their own children about what a great woman she was. They look forward to continuing the tradition so that their names will be visible next to those of their ancestors.

Use case 3 - Lionization

Mr. C has been donating through the ZEN-CP platform for many years now. Even though he went through a few periods of economic hardship and had to stop giving at various times along the way. Through it all he remained a member of ZEN-CP. The money that Mr. C so kindly gave was used by diverse charities. From educational funds for orphans to organizations that seek to preserve the traditional culture of his people - he even gave to an animal welfare co-op!

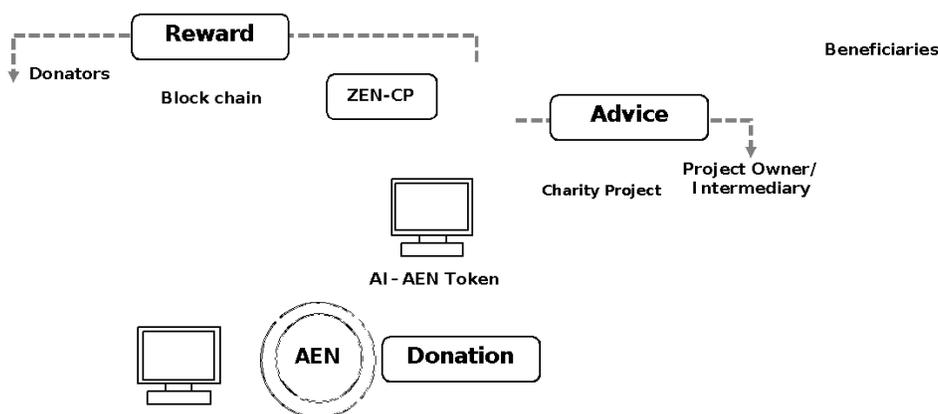

ZEN-CP is built on the blockchain so the system sees that Mr. C might not be giving a lot at any given time, but it also see that he gives very consistently and has been for 10 years. Many, many charities have received much needed support thanks to Mr. C's generosity over the years.

After more than 10 years of consistent giving, the ZEN-CP system sent Mr. C a notice. He was to be rewarded for his years of giving and his countless contributions on the ZEN-CP site. His name and the litany of donations he had made over the last decade would be posted for all to see and admire. His achievements were viewed by the site's visitors and many left messages of thanks, support, and admiration. Both charity organizers and people that benefited from his donations saw his contributions and made known their insoundable appreciation for his sacrifice and dedication.

Unit 2: System Architecture

2.1 The ZEN Charity Platform (ZEN-CP)

ZEN Charity Platform (ZEN-CP)

ZEN-CP is a new blockchain platform that has been built to remove obstacles that prevent people from making donations to projects they care about. Users will be able to learn about new donation opportunities via their personal computers, smart TVs, smartphones, tablets, or whatever other device that might be connected to the internet. It will be extremely easy for users to find a charity that interests them and donate in just a few clicks. The platform itself is built to empower users - giving them more options than ever and offering unique ways to donate. Even better, they'll be able to ensure that their money is used in a fully transparent manner.

Donors simply purchase AEN tokens (or use the AEN tokens that they already possess), select a project that is currently raising funds, check the conditions for donations, and submit their funds.

The AEN token is a virtual currency and as such it can easily be exchanged for other currencies.

Information regarding when and how people donate is stored as transaction data on the blockchain. How the funds are ultimately used is also recorded and saved in the same way. This greatly increases the transparency of the process, trust in the organization, and, ultimately, it motivates the recipient of funds to succeed.

“Donor Big Data Dynamic Analysis” (DBDDA)

On the ZEN charity platform we will conduct kinetic analysis using artificial intelligence (AI). All data regarding donations will be recorded and stored using the blockchain. This is a kind of “Big Data” that can serve an important purpose on the platform. One such use case for this data is the communication of the use, final destination and social impact of a donation to its donor. This allows them to see exactly where their money went and it allows the organization to improve upon inefficiencies.

The ZEN-CP gives useful advice to the recipients, and gives feedback and suggestions (such as donor improvement results) in order to help them develop more attractive rewards for donors. In addition, when starting a new project, they will be able to target potential donors based on the personal attribute information (PAI) of previous donors on the platform.

The platform offers a more efficient manner through which donors may discover projects that really match their interests. By basing donations around individual interests, a truly strong community can be built around the raising of funds.

2.2 Additional Features:

Ease-of-use

All platform functionality will be fully connected to the web, enabling key authorization functions and services, as well as robust wallet interactions. This will be the case regardless of the user's device operating system - iOS, Android, or Windows.

Smart-Contract-as-a-Service

The Wowoo platform offers a wide array of service modules, each addressing a different use case.

Plugins, APIs and the Marketplace

In the future, plugins, extensions and AI artefacts will be available for 3rd party integration. The platform will be accessible via APIs for external developers.

Unit 3: Business Model

3.1: Monetization Strategies

The data collected and analyzed by the AI will initially have a low degree of precision. Accuracy will be improved through machine learning - as more and more data is analyzed by our AI algorithms, the more accurate the machine will become in its ability to generate quality results.

Although token sale participants are taking a risk by purchasing tokens at an early stage in the development of the project, an increase in the token's value is expected as the user base of the platform grows. The greater the amount of data that has been processed on the platform, the greater the value of the investment.

3.2 Payment Processing

The ZEN Project seeks to eliminate unnecessary barriers to entry, while still providing strong market support for AEN tokens. To this end, the exchange and use of tokens will run as a background process. Consumers will be able to make payments using any of a number of major fiat and cryptocurrencies.

3.3 Go-to-Market Strategy

Zenith IoM Ltd is already in talks with its first major customer, a company which will conduct pilots in data retention. We also plan to bring ZEN to the mainstream market and into mass adoption by creating value, and encouraging adoption directly through well-known public figures. Following the successful launch of our product, ZEN will expand aggressively with the help of our network of country managers, partners, advisors, customers, and employees.

Unit 4: ZENITH IoM Ltd Token Sale

4.1 Overview

In order to enhance the ZEN platform's value as a global charity platform, the AEN token sale will take place in the form of a public offering. As AEN is a new type of donation token, we believe that it is important for holders to be able to receive benefits from both the retention and utilization of the token.

4.2 Airdrops (“AEN Drops”)

We will schedule periodic AEN token airdrops (called AEN drops) as an incentive for holders. We will distribute free AEN tokens to token holders in proportion to the amount and frequency of their donations on the platform.

The calculation formula for the number of AEN tokens that donors will receive is as follows:

AEN-drop quantity = $k * (\text{cumulative donation token quantity} + \text{token holding balance as of the evaluation date})$

Zenith IoM Ltd will decide the coefficient k (grant rate) of the above formula discretely. Contributors on the ZEN platform will not only benefit from non-economic rewards, but can be benefited of the increasing utility value for the token, as instigated by AEN drops. Tokens to be distributed during AEN drops will be allocated from a predetermined inventory of the total token supply.

Based on the above assumptions, the company will not need to burn tokens. The token will already be enough in demand to counteract the increasing token supply.

4.3 Token Sale Procedure

The Zenith IoM Ltd (Issuer) will carry out the token sale as follows:

1. All participants must register via our website. After registration we will perform a KYC check on all participants.
2. The participants who complete the KYC verification and register their individual NEP-5 address will be added to the whitelist.

3. The Issuer mints ZEN Token (AEN) and sends to the purchaser's registered NEP-5 address.
4. Once completed (completion being the end of the Token Sale period or the attainment of the Soft Cap/Hard Cap) the funds raised will be used as per the stipulations on the official roadmap.

**Those who purchase Wowoo tokens using tokens that have been issued on the Wowoo platform, and who are already registered in that platform's KYC whitelist, will not be required to go through the KYC process again. That being said, the validity period for that KYC is one year. If it has been more than one year since you have been whitelisted on the Wowoo platform, you are invited to submit documents for the Zen KYC procedure.

4.4 Token Information

Token Name	ZEN Token (AEN)
Token Symbol	AEN
Payments Accepted	BTC, ETH, NEO, WWB (WowBit)
Total Token Supply	1,000,000,000 AEN
Hard Cap on Token Sale	450,000,000 AEN
Soft Cap on Token Sale	330,000,000 AEN
Price per AEN	1 AEN = 0.0005 ETH 1 AEN = 0.000027397260274 BTC 1 AEN = 0.004143206 NEO 1 AEN = 0.419976037 WWB
Pre-Token Sale Opening	July 2018 13:00 UTC+0900
Token Sale Opening	August or September 2018 13:00 UTC+0900
Token Sale Closing	August or September 2018 13:00 UTC+0900
Smart Contract Address	Will be announced to whitelisted token sale participants
Minimum Subscription	8,000 AEN
Maximum Subscription	20,000,000 AEN
KYC Policy	During the token sale, the issuer will carry out Know Your Customer ("KYC") verification procedures for all of the purchasers of AEN Tokens. This will involve the submission of scan of the purchaser's passport or national ID. A corporate account should submit a scan of the representative director's passport or Photo ID. Additional documents may be required.
Restrictions	AEN tokens are available for purchase in any country except in those countries or jurisdictions where one or more of the following statements holds true: (1) Cryptocurrency or blockchain technology is prohibited (2) The transfer of tokens is prohibited (3) The issuer does not meet the legal requirements of the country. (4) Purchasers are not eligible according to the conditions laid out in the token sales agreement.

Delivery	Following the conclusion of the token sale, the issuer will deliver AEN tokens to token sale participants.
Utility of Token	AEN tokens are used to access certain functionalities of the service platform including registering a new asset, transferring an asset, and a variety of other authorization features. The AEN Token does not represent or confer any ownership right, or any stake, share, security or equivalent rights.
Items	Contents
Token type:	NEO protocol (NEP-5)
Issuer:	Zenith IoM Ltd (Isle of Man)
Liquidity	<p>There are no exchanges accepting ZEN token at this time. The Issuer will make every effort to get the token listed on major crypto-exchanges in the future.</p> <p>Token Holders are free to take advantage of the benefits of the NEP-5 protocol by transferring AEN on a P2P application or through an exchange or OTC (Over-The-Counter) dealer that handles altcoins. That being said, the issuer will cannot guarantee the security of these transfers.</p>

The ZEN token (AEN) is a convenient, efficient and economically advantageous token which acts as a means of payment for services provided on the ZEN service platform. AEN tokens are not securities to be used for speculative trading purposes. There is no public market for the AEN and there is no guarantee on the future value of the AEN. The possibility exists that the AEN could be worth nothing. Ownership of AEN carries no rights, express or implied, other than the right to use AEN as a means to obtain Services, and to facilitate usage of and interaction with the Service Platform, if successfully completed and deployed.

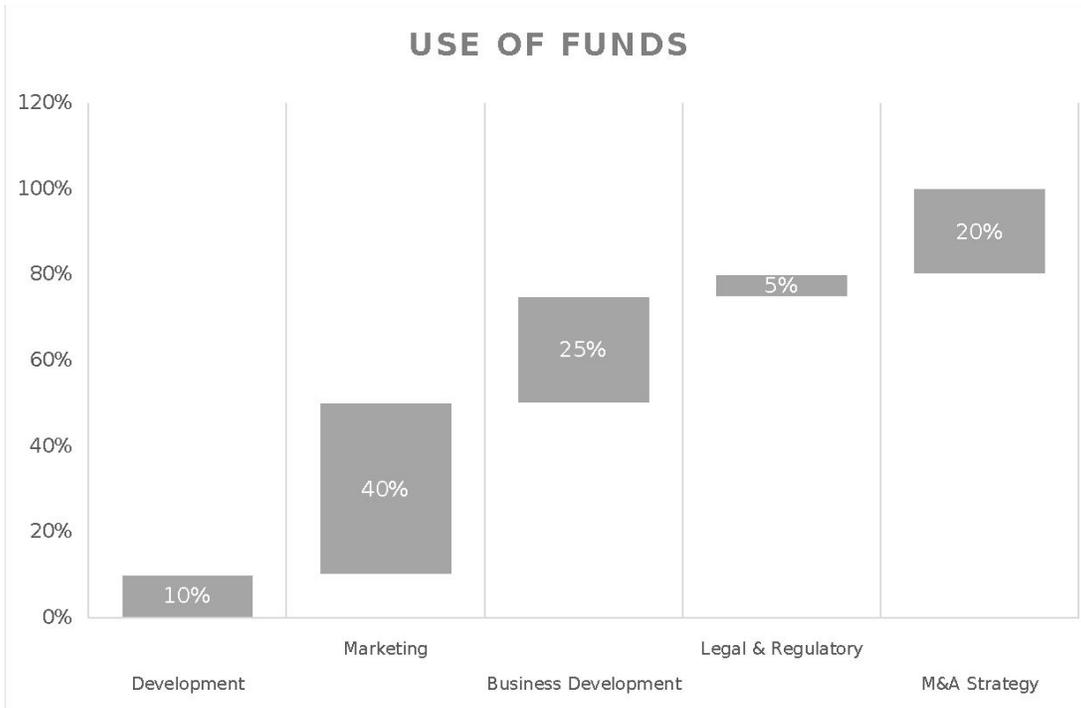

In particular, the token purchaser should understand and accept that AEN does not represent or confer any ownership right or stake, share or security or equivalent rights, or any right to receive future revenue shares, intellectual property rights or any other form of participation in or relating to the service platform, and/or Service Operator and its corporate affiliates, other than rights relating to the receipt of services and use of the service platform, subject to limitations and conditions in these Terms and applicable Platform Terms and Policies. AEN are not intended to be a digital currency, security, commodity or any other kind of financial instrument.

4.5 Use of Proceeds

The primary use of funds raised during the token sale will be platform development. Funds will also be allocated to marketing.

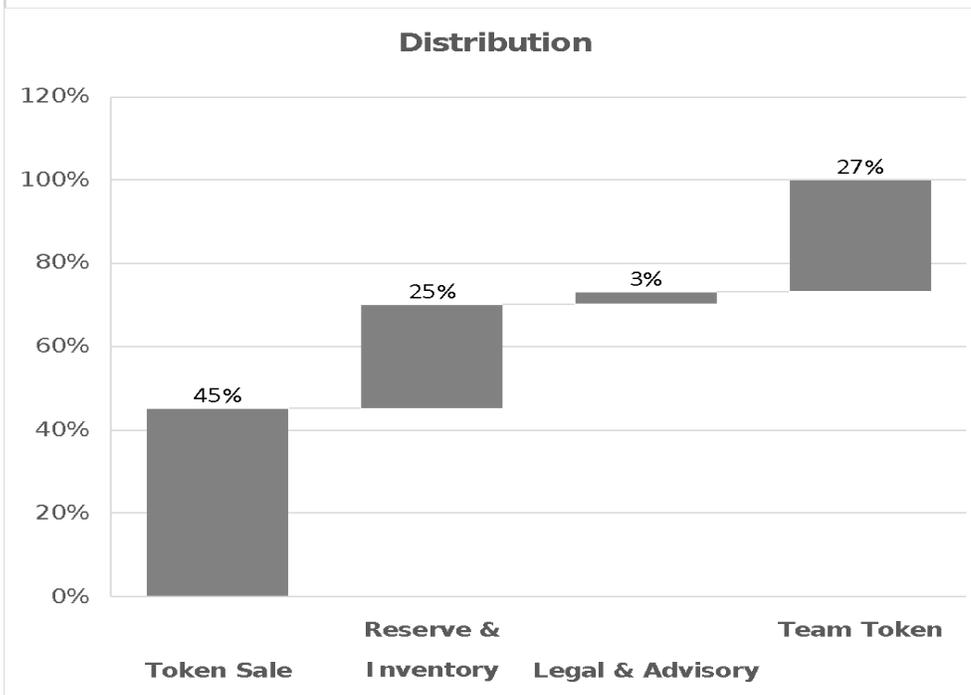

The following table illustrates how, over the next five years, funds raised during the token sale will be used::

Development	10%
Marketing	40%
Business Development	25%
Legal & Regulatory	5%
M&A Strategy	20%
	100%

4.6 Token Distribution

Token Sale	45%
Reserve & Inventory	25%
Legal & Advisory	3%
Team Token	27%
<hr/>	
	100%

4.7 Roadmap and Milestones

The ZEN project has one and one focus only: creating a viable donation platform in the shortest time possible.

July 2014 – April 2018

- Our supporting partner, Redhorse Corporation, has been concluding agreements to provide tax payment support to municipal governments in Japan for the so-called “Hometown Tax Payments”
- Redhorse Corporation has been providing various service packages to municipalities, such as resident tax collection, rewards development, supply chain setup, reward logistics, taxpayer information management, CRM, and settlement payments. As of April 2018, Redhorse has signed with more than 250 municipalities.

January – March 2018

- We designed and developed a brand new, highly efficient, and perfectly transparent, donation model and platform. We greatly benefited from our experience and know-how from our time at Redhorse Corporation.

May 2018

- White Paper and Concept Validation - Following the release of the white paper and the resulting community feedback, we fine tuned the concept and laid out the roadmap for the ZEN Charity Platform (ZEN-CP).

-

July 2018

- Pre-sale

August – September 2018

- Token sale (ICO)

March 2019

- Product Development 1: Development of the AEN token will be completed.

March 2019

- Business Development 2: Field test within some municipalities - Apply AEN tokens to the “Hometown Tax Payments” system and design the collaboration procedures with the community currency of the municipalities.

July 2019

- Product Development 2: Development of the prototypes of the ZEN-CP products will be completed.

- Business Development 3: Start official introduction to donation markets in the municipalities.

March 2020

- Business Development 4: Expand the market scope of ZEN-CP to all types of donations, including donations involving corporations, foundations and academic institutions.
- Promote AEN denominated donation projects to more municipalities.

January 2021

- Global Expansion : Start global expansion of the ZEN-CP., presenting to a broader community the success we have experienced in Japan. The company will target Asian countries first, then North America and Europe. Finally, the company will enter the African market. We will do thorough research on each potential market, taking into consideration the rate of growth in the cloud funding industry, presence of a donation market, the stability of the local contribution culture and the needs of the community.

December 2023

- By this time, we will have established a reputable status in the global market.

Our dream for the platform is as follows:

- Donors will have sound incentives to donate efficiently using AEN tokens and the ZEN Charity Platform in general.
- A community will be built where users feel a real need to use donated funds in a transparent manner..
- Donors will be able to easily and discover charity projects through data analysis. This enhances the probability of good matches between recipients and donors.

4. 8 Notes Regarding the Release of Token Sale Funds

After the token sale has ended, funds raised will be sent to the issuer for management. For calculation purposes, all non-USD currencies will be converted into USD at the relevant exchange rates at the moment of their collection. Development funds raised during the token sale will be released to the team upon the achievement of the set milestones.

4.9 Notes Regarding Token Liquidity

We cannot and will not guarantee that the ZEN token will have a high degree of liquidity at any given time. That said, we will make every effort to encourage the liquidity of the token.

Our goal is to achieve and sustain a high degree of liquidity for AEN. We believe this can be achieved through a nuanced understanding and application of the laws of supply and demand. By implementing subscription and transaction fees for platform services, the token is projected to increase in demand.

“Buy-side” liquidity will primarily be facilitated this way.

4.7.1 Restrictions on selling in the secondary market

The following rules will be enforced regarding how AEN tokens can and cannot enter the secondary market (cryptocurrency exchanges).

Token Sale Tokens: Token Sale participants will be in no way restricted in their trading of AEN tokens on secondary markets.

Founder & Angel Tokens: ZEN founders and angel investors will be limited to selling, at most, 20% of their AEN token holdings until six months after the end of the token sale, at which point the tokens will be vested monthly at a rate of 10% for one and a half years (18 months).

Unit 5: Corporate Structure

5.1 The ZEN Group of Companies

5.1.1 The Zenith IoM Ltd

The Zenith IoM Ltd is a registered corporation in the Isle of Man. The company is the operating entity of the Service Platform that will be providing services, facilities, and consulting to Service Operators. The company will both develop the ZEN System and monitor the system and platform. Some functionality, such as security audits, may require the enlistment of third-party vendors and service providers.

The Zenith IoM Ltd will issue tokens and oversee the procurement of funds. In the future, we will select reputable, knowledgeable people in the blockchain and charity industry and encourage their participation in the project. Should there be a major problem to be resolved or serious change to be made, the director will seek a resolution through a voting process. However, the decision will ultimately be the responsibility of all network participants.

CEO: Takamasa Kawasaki

Email: info@zen-foundation.com

Web: <https://zen-foundation.com>

5.1.2 The ZEN Foundation

This organization is committed to the assistance, development, and governance ZENITH IOM LTD. The ZEN foundation is also tasked with maintaining a healthy community and atmosphere on the platform.

5.1.3 Redhorse Corporation

The company will be responsible for the proposition and spread of ZEN-CP to potential customers such as local governments, business, and NGO corporations. In addition, it will seek to undertake activities that raise the awareness of AEN among the general public. Redhorse is listed on the Taipei Exchange and has the security code 2928-KY.

5.1.4 Redhorse Global LTD

This company is tasked with bringing ZEN-CP and AEN tokens to the whole world.

5.2 Mission and Vision

Our mission is to make donations more effective, and to make the giving process more efficient. - no matter where you are. We aim to put an end to a number of major problems that are plaguing charitable pursuits all over the world.

Donation is often an opaque process, wherein the donation goes through various stages that are not at all clear to the donor himself. He might not see fees and he can't even be sure that the money is going to the cause he wants it to. There is also the risk that the received funds will be improperly used. Further, there are often cases where the amount that can be donated is limited by the situation itself if you are doing so by traditional means. The donor must also take into account remittance and transactions costs when doing international donations.

As you can see, the social cost of these kind of donations can be huge, but it presents an amazing opportunity for both the donor platform and donors. We are aiming to become the world's largest donation catalyst, linking donor's goodwill and money with the recipient's goodwill!

5.3 Team

Our team is a healthy mix of software engineers, blockchain developers and consultants, design experts, marketing and branding specialists – all committed to the success of this venture.

Takamasa Kawasaki

CEO - Zenith IoM Ltd

Takamasa is Chief Executive Officer of Redhorse Corporation. Redhorse Corporation is a listed company in Taipei Stock Exchange (code:2928), a

Regional Vitalization and Travel Souvenir Company with a history of over 50 years and widespread presence in Japan. Passionate about diversity which is reflected in his professional career.

Takamasa is also a start up entrepreneur, with Redhorse Global as his latest venture in the Travel-Technology space. He has experience in driving change and growth in large multinational corporations as an executive, having several years of experience as a management consultant, laying the foundation for his strong business acumen. He holds a Master's Degree from Hong Kong University of Science and Technology (HKUST) as well as a bachelor degree of Tokyo University. He is qualified as CPA (Japan).

Concurrent post

- Founder and Chairman of Redhorse Global Ltd.,
- A Secretary-General of Japan Inbound Federation

Major literary works;

- The Power of Embracing Diversity (ISBN : 978-4569820385)
- Japan is Goodwill Nation (ISBN : 978-4881442449)

Chris Okano

Chris is the CEO of Redhorse Global Co., Ltd (Odigo) and the Founder/Chairman/CEO of Redhorse Media Ltd. (Tokyo Creative). Odigo is currently leading the way in introducing new destinations and markets to Japanese and Chinese-speaking clients. Tokyo Creative houses top influencers from across Japan, and in just 4 short months, the Tokyo Creative influencer network accumulated over 10,000,000+ fans on social media and an average of 26,000,000+ monthly views on YouTube. Tokyo Creative's influencer network currently is also the leading platform for English-speaking influencers in Japan.

Media Appearances:

Broadcast

- Hosted the “food corner” section on Tokyo Extra (TBS) with prominent Japanese-American actress and model, Mayuko Kawakita
- Featured on “Sanmano KarakuriTV” & “Watashino Naniga Ikenaino” (TBS) through YouTube as OkanoTV

Print / Digital

- Featured in the Japan Times twice:
 - “It takes one to know one: How YouTuber Chris Okano built an agency to help his fellow J-vloggers”

- “Introduction to the OkanoTV YouTube Channel”
- Featured on Japan Info “Want a Glimpse of Life in Japan? Check Out These 7 Awesome YouTubers!”
- Featured in other reputable outlets including Daily Star UK, Grape Japan, J1 Radio, GaijinPot and JAM

5.4 Council

The Zenith IoM Ltd Council is a group that will oversee the token sale and various projects that will take place on the service platform. The council includes blockchain engineers, inventors, founders, and investors.

Kaneto Kanemoto
CEO & Founder/ OKWAVE

Kaneto is Chief Executive Officer and founder of OKWAVE, the oldest and largest Q&A social community in Japan. The vision of OKWAVE is to foster mutual support through community. The platform operates various subscription services that allow celebrity Q&A sessions. The platform also offers enterprise customer support solutions. OKWAVE currently enjoys the largest market share in this domain. OKWAVE went public in June 2006 and is listed on the Nagoya Centrex Market (3808: Nagoya).

Kaneto holds a bachelor's degree of Fine Arts and Music from Aichi Prefectural University in Japan.

Gen Matsuda
Director / OKWAVE
CEO & Founder/ Asz Holdings

Gen has more than 13 years' experience in investment banking, turnaround management, marketing, and financial consultation. He has worked in diverse environments all over the world as representative director of AsZ Holdings, Inc. Today, his main passion is the blockchain and all of its applications and possibilities. Stricken by the numerous security issues, password breaches and Internet fraud scandals, he decided to tackle these problems by decentralizing authorization and authentication in an innovative and secure blockchain ecosystem. In 2016 he became the youngest person to make a statement at the public hearing of the Japanese Diet. He first gained experience working in a startup environment when he was a student at Waseda University. Since then he has been working to support the sales operations at over 1,360 companies as CEO of AsZ Group Holdings. AsZ was founded with the participation of 19 different companies located throughout Japan, Hong Kong and Greater China (Shenzhen, Dongguan).

Yoshiaki has also written the following texts:

- 7 Powers for Successful Inbound Tourism and Urban development – The Possibility to Create our Countryside
- Profitable Inbound Business 10 Key Rules.

Yumiko Watanabe

Director of Kids' Door

Yumiko Watanabe graduated from Chiba University with a degree in engineering. After working with a major department store and a publishing house, Ms. Watanabe went on to spend several years working as a freelance marketer. While working freelance, she spent a year living and working in the United Kingdom with her family. While there, Ms. Watanabe was impressed by the social resources available for child-rearing. After leaving the UK, Ms. Watanabe was confronted with the growing inequality in Japan's educational and childcare systems. So in 2007 she started Kids' Door. Kids' Door was founded with the mission of creating a society wherein all children are given the opportunity to pursue their ambitions. In order to make this dream a reality, Kids' Door provides educational support and exposure to new experiences for children from low-income and single-income households. Following the Tohoku Earthquake in 2011, Kids' Door has also been working to help revitalize affected communities through programs including childcare, after school support, and career training.

- Cabinet Office for children's future support national movement campaigner
- Ms. Watanabe is also a member of many government agencies.
- Senshu University lecturer

Fujimaru Nichols

CEO / Wowoo Pte, Ltd.

Fujimaru is responsible for running Wowoo Operator. He is deeply involved in both international business and the cryptocurrency scene. **“One impression can end a war. One impression can free the mind from the icy grasp of ignorance.”** After experience in the field of international business, he decided to commit himself fully to the blockchain revolution.

Today, he valiantly leads his team with this principle as his guiding light in the darkness. He is working to spread the use of this new token in the real world and discover innovative use cases.

Takashi Onozawa

Advisor/Redhorse Group

Takashi has over 30 years' experience in the field of financial consulting, as well as in Venture Investment, Private Equity, and Mergers and Acquisitions. He oversaw numerous IPOs when he was working at JAFCO (Japan's largest Venture Capital firm). He has ample operational experience - this includes his participation in the implementation of the TOB at Redhorse Corporation Ltd., and a major IPO on the Taipei Exchange.

Glossary

Definition of general terms used in this document

Token	<p>A digital currency that is emitted using distributed ledger technology (Tokens are interchangeably referred to as cryptocurrencies).</p> <p>Tokens are generally divided into the following categories: “Payment Tokens” are tokens used as a form of payment, “Utility Tokens” are tokens that serve specific purposes within a platform or environment, and “Asset Tokens” are securities which represent the ownership of or rights to an asset.</p> <p>In this white paper, the token sold by the issuer during the token sale is the ZEN token (abbreviated AEN).</p> <p>AEN is a hybrid token with the functions of both a payment token and a utility token.</p>
Issuer	<p>the issuing company that raises funds via the issuance of a token. The Issuer referred to in this whitepaper is Zenith IoM Ltd.</p>
Holder	<p>A user who owns tokens, regardless of the means of acquisition. The Holder must be KYC verified.</p>
KYC	<p>An acronym for “Know Your Customer.” A verification process that includes identification based on the rules and processes outlined in the AML/CTF Rules (Anti-Money Laundering/Counter-Terrorism Financing Rules) based on the FATF (Financial Action Task Force) guidelines. This process is conducted will be conducted the first time AEN is sold to a client. KYC will be performed by all Service Operators.</p>
Whitelist	<p>A list of qualified applicants who have completed both KYC verification and registration of their NEP-5 protocol addresses.</p>
Purchaser	<p>A person who accepts the conditions and contents outlined and described in this Whitepaper and, after having understood the terms and conditions, purchases ZEN Tokens (AEN) through the Token Sale.</p>
Ecosystem	<p>The entire business ecosystem involving both the users themselves and the services provided by service operators through the service platform.</p>

Service Platform	The system that uses this token as the foundation of its ecosystem and service offerings.
Service Operator	The entity that operates the service platform itself. In this whitepaper, the Issuer 'Zenith IoM Ltd.' is also the Serveric Operator.
Customer	The individual or entity that takes advantage of or uses one of or multiple services provided by the service operator. This is dependant upon the nature of the service itself, as well as the holder and/or third party.
Wowoo System	A computer system that administers this generation of Wowoo Tokens and controls the diverse functions of the Wowoo Platform, including related product that supports the users.
Token Rights	The Holder's rights as set out and delineated by the Service Operator. These rights are implemented and ensured via the Wowoo system.
Reward	The return obtained via the exercise of Holder's rights. This includes both economic compensation, as well as other forms of compensation compensation (including those without direct economic value).
Smart Active Control (SAC)	The core function of the Wowoo token system. It is possible to set various rights relationships and contract conditions to each token.
Special Resolution Function (SRF)	A function that allows all Token holders to vote on events that take place within the a Wowoo-based Token architecture. An example increase or decrease in the upper limit of issued Tokens. All of which could potentially change the initial conditions of the token.
Token sale	The sale of newly issued ZEN Tokens (AEN) based on the description in this Whitepaper. There are two types of token sales: the pre-sale and the token sale proper.
Fact Sheet	A statement summarizing the various conditions of the Token Sale.
Soft Cap	The upper limit of the number of tokens to be sold during the Token Sale. At this point the Token Sale could be terminated - even in the middle of the holding period. This is done at the discretion of the Issuer.
Hard Cap	The unsurpassable maximum quantity of tokens that can be sold during the Token Sale.
Exchange	The private processes that involves the handing over of one token in return for other crypto currencies and/or fiat currencies.
Wallet	Applications that have the function of storing, sending, and receiving this token. The wall also generates the holder specific address, as well as his secret private key.
Address	The primary reference to the storage location of the token. The address is generated by the holder (it is functionally similar to the bank account number).
Unjustifiable Premiums and Gambling related Regulations	A series of laws and regulations that prevent the imposition of unjustifiable premiums and labeling (e.g. in Japan, it refers to "The Unjustifiable Premiums and Misleading Representations in Marketing Act", but the term is not limited to this single law).It also refers to gambling laws. These laws vary depending on jurisdiction and can vary greatly from

(UJPGR)	country to country.
---------	---------------------

Financial Regulations	A series of laws and regulations that pertain to financial institutions, securities and corporations (in Japan, it refers to various laws including the “Act on Settlement”, “Financial Instruments and Exchange Law”, but not its scope is not limited to these laws). These laws vary depending on jurisdiction and can vary greatly from country to country.
-----------------------	---

Definition of technical terms used in this document

Big Data	Data sets that are so voluminous and complex that traditional data processing software and techniques cannot effectively parse, organize, and utilise them.
----------	---

Artificial Intelligence (AI)	Software that utilizes machine learning techniques and that demonstrates a capacity that could be broadly defined as intelligent;
------------------------------	---

Intellectual Property Rights	The entire rights that are exclusive to the owner of specific intellectual properties.
------------------------------	--

Third-Party Use Organisation	An organisation that uses attribute and personal information with the permission of the owner. Permission is also required from the point of view of the Servicer Operator before the Third-Party User can begin using attribute and personal data..
------------------------------	--

Outsourced Agency	A contractor who acts on behalf of part of or all of the business with the consent of the Service Operator.
-------------------	---
